

kiditec® - „Multiset 1114“, the newest set of Techno Bloxx

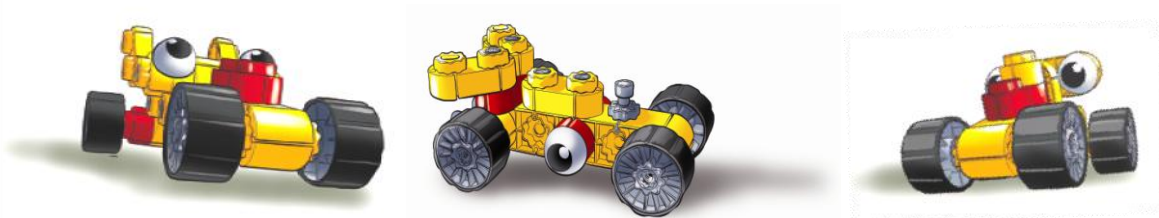

From July 2009 onwards children at the age of 3 years and older have the opportunity to discover their own creativity in a new way. The Multiset 1114 has been developed to meet the didactically needs of the young children. This set offers a perfect combination of playing features and the development of motor skills. And with the newly developed eyes, the models have their own character and liveliness.

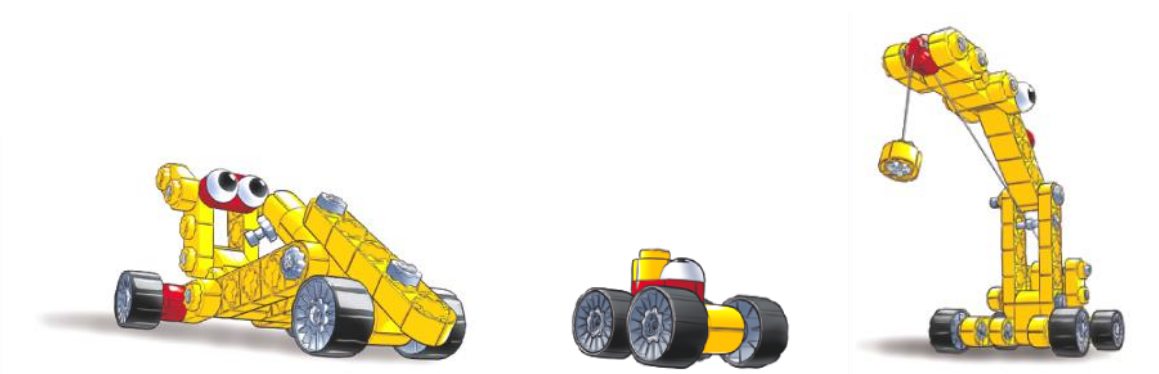

The big building parts and the 3-dimensional fixation options offer the children the opportunity to build quickly very stable models, ready for extensive playing.

The kiditec® Multiset 1114 offers innovative and stable building possibilities which inspires the fantasy of the little inventors and which supports at the same time their motor functions and their agility.

Whether a cool, multifunctional big crane of 82,5 cm (32,5 inch) in height or an all terrain buggy, a motor trike or a racer, this new Multiset 1114 offers unlimited, enjoyable play time. For this set we have developed eight models and for each model we have created an assembly instruction. The set includes the assembly instruction of the big crane on A4 paper. The other assembly instructions are digitally available for downloading from our website www.kiditec.com.

All building parts of the Multiset 1114 are fully compatible with the components of the already existing kiditec® sets. Everything fits together and a combination of sets will even further extend the building possibilities to new dimensions.

Also for the packaging of this set we have continued our house style with a self explaining illustration.

Swiss Made – Quality is important for us

All components of the kiditec® Multiset 1114 distinguish themselves with a very high quality, in design, through stability, functionality and workmanship. The models can quickly be adapted to the fantasy of the children. Everything fits to and in each other.

All kiditec® components are developed and manufactured in Switzerland with the highest quality standards. The set has successfully been tested according to the CE EN 71 norm by the LGA in Nuremberg, Germany and it fulfills the actual requirements regarding product safety.
